

Pixel Tablets

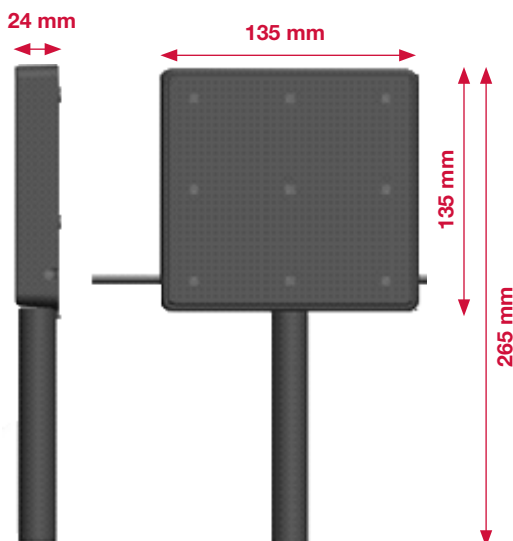

The Landscape Video Solution

Pixel Tablets are an innovating product, developed and manufactured by PRG Projects, in order to create large scale landscape video solutions for venues and stadiums.

Originally designed for the London 2012 Olympic Games, these tablets offer a unique show element, turning a venue seating into a large video surface. The Pixel Tablets are flexible and can be implemented in any spectator area of a venue.

The tablets are designed for installation between the seats of the spectators and consequently create a landscape video effect when placed in their holders. If you wish to create crowd involvement and enhance the spectators experience, the Pixel Tablets can also be hand-held, which makes them flexible and user-friendly. One cable can connect to up to 28 tablets in a row.

Specifications:
